

LegalEase – Phase 05: Project Development

1. Development Overview

LegalEase is developed using components for application logic, user interface and API/backend processing.

2. Existing Project Components

The GitHub repository contains components such as `ai_core`, `frontend`, `image`, `legalEaseAPI`, `app.py` and `config.py`. These existing project files should be retained.

3. Development Process

1. Set up the environment.
2. Configure dependencies/settings.
3. Develop or maintain the frontend.
4. Implement backend/API functionality.
5. Connect AI processing.
6. Run and verify the application.

4. Integration

The frontend communicates with the backend/API, which uses configured AI/application components to process supported requests and return output.

5. Version Control

Project source files are maintained in the public GitHub repository and updated as development progresses.

6. Conclusion

Development converts the approved requirements and design into a working LegalEase application.
