

LegalEase – Phase 02: Requirement Analysis

1. Introduction

Requirement analysis identifies what the LegalEase application should do and what resources are needed.

2. Functional Requirements

- Accept legal-related user input.
- Process the input using the application's AI/backend components.
- Provide a relevant response.
- Provide a simple user interface.

3. Non-Functional Requirements

- Easy to use
- Reasonable response time
- Reliable operation
- Secure configuration
- Maintainable code

4. User Requirements

Users should be able to open the application, enter supported legal-related input, submit it and view the resulting AI-assisted information.

5. Software Requirements

Python, VS Code or another suitable code editor, web browser, internet connection and the project's required libraries/configuration.

6. Hardware Requirements

Computer or laptop with sufficient memory/storage and internet connectivity.

7. Conclusion

These requirements provide the foundation for designing, developing and testing LegalEase.
