

LegalEase – Phase 07: Project Documentation

1. Project Title

LegalEase – AI-Powered Legal Assistance

2. Abstract

LegalEase is an AI-powered application intended to provide a simple way for users to interact with legal-related information.

3. Problem Statement

Legal information can be difficult for common users to understand because of complex terminology and documents.

4. Objectives

Provide an easy-to-use interface, support AI-assisted processing and present understandable information.

5. Requirements

The project uses a computer/laptop, internet, Python, development tools such as VS Code, a browser and required libraries/configuration.

6. System Design

User → Frontend → Backend/API → AI Processing → Response → User.

7. Development

The repository contains frontend, AI/backend and supporting components. Development involves configuration, integration and application execution.

8. Testing

Test representative valid inputs and suitable edge cases; include test results and screenshots.

9. Benefits

Provides a user-friendly approach to interacting with legal-related information and demonstrates an AI-based application.

10. Future Enhancements

Possible improvements include broader document support, better response handling, enhanced UI and stronger security controls.

11. Conclusion

LegalEase demonstrates how AI and application development components can be combined for an accessible legal-assistance application.
