

LegalEase – Phase 06: Project Testing

1. Testing Objective

Testing verifies whether LegalEase features work as expected and identifies issues that need correction.

2. Testing Approach

Test normal supported inputs, empty or invalid inputs where applicable, and representative legal-related queries.

3. Sample Test Cases

Test 1: Open application → application loads.

Test 2: Enter valid query → relevant response appears.

Test 3: Empty input → application handles it appropriately.

Test 4: Another valid query → response is displayed.

Test 5: Final output → expected result is visible.

4. Test Evidence

Record expected result, actual result and status for each test. Take screenshots of important successful outputs and errors.

5. Defect Handling

If a test fails, identify the component, correct the issue, test again and record the updated result.

6. Conclusion

Testing provides evidence that the implemented features work as intended.
