

LegalEase – Phase 03: Project Design

1. Design Overview

LegalEase is designed so that a user interacts with a frontend, the request is handled by backend/API components, AI processing is performed and the result is returned to the user.

2. High-Level Architecture

User → Frontend → Backend/API → AI Processing → Response → User

3. Main Components

- Frontend – user interface
- Backend/API – request handling
- AI Core – AI-assisted processing
- Configuration – application settings
- Output – response shown to the user

4. Working Flow

1. Open LegalEase.
2. Enter supported legal-related input.
3. Submit the request.
4. Backend/API receives the request.
5. AI/backend components process it.
6. Response is displayed.

5. Conclusion

The design provides a clear flow from user input to AI-assisted output and supports structured development and testing.
